

Record-channel necessary-screen summary

10 detailed ledger rows -> 7 reader-facing families -> 0 identified physical PES channels

NECESSARY SCREEN

Necessary gates (passing them is not sufficient by itself)

action + declared split -> constrained, canonically normalised modes
-> physical vertex/projector -> physical state + retarded/noise kernels
-> finite pairwise record functional

MISSING VERTEX

Missing physical vertex

linear director; mixed channel

OPEN INPUTS

Not identifiable

scalar trace; HRC/static;
independent tensor; mixed

TESTED SCOPE ONLY

Scoped incompatibility

minimal director composite
tested vacuum/thermal only
general channel:
NOT IDENTIFIABLE

SPLIT REQUIRED

Conditional double counting

integrated radial mode needs
new Wilsonian split,
subtraction and counterterms
proved before reuse

The seven-family graphic aggregates - and does not replace - the detailed ten-row ledger.

Static HRC compliance is a response, not a PES noise kernel;
imported D-P numbers are external Level C.

 missing physical vertex

 not identifiable / Open inputs

 incompatible in tested scope

 double counting unless split proved
