4D Euclidean §2
P6
Non-uniform ordering §2
SSB
O(4)→O(3), selects w §3
Universality Corollary
one Φ → one K^AB → one cone §4.3
ħ = S_loop/2π
Planck const. §5.6
P(X) theorem
no orientation stiffness
Level A, §3
Euclidean corr.
G_E(X, X')
§5
NLO/induced stiffness
κ_n = C_n u_0^2
M_G^2 ~ Φ_0^2
Level B, §5.1
Lorentzian metric §3.6
3 Goldstone bosons (fuzzy DM) §4
c* = √(β/(α−β))
Grav. const. §5.3
G_N = c*^4/(8π M_G^2)
Grav. const. §5.4
Gauge architecture
U(1) bundle (A) · SU(2) structural (B+)
§7
Klein–Gordon equation §3.6
Schrödinger equation
QS
Unruh effect
T_U=ħa/(2πc*k_B)
QS
Parity violation
Oriented condensate
→ SU(2)_L selected
§9
Einstein eqs. (linearised) §6
2nd law of thermodynamics §3.9
Dirac eq. §9
Neutrino sector §8.8
one-chiral weak route (B)
embedded neutrino preferred (C)
M_R^geom = √(Φ_0 v_2)
PMNS intact; 0νββ discr.
Director coupling
μ_A ψγ^A n_A ψ
§7.6
Discrete-symmetry architecture (§9.4)
P, T, C · conditional CPT
via OS reconstruction
Branch-pair on S³
ℒ_δ → CPT-odd phenom. op.
Anomaly architecture (§9.5)
EW conditions verified, inherited content (A)
ℒ_δ transparency lemma · solution structure (A cand.)
Emergent-graviton role Open (OP-GUT6c)
Flavour architecture
CKM from overlap misalignment
PMNS from overlap + seesaw
Near-alignment of flavour rotations
CP phases in Yukawa / Majorana sector
Numerical Open under OP-Yukawa
SU(3)_c [OPEN]
dim su(3)=8 > 6=dim so(4)
requires extended structure
3 generations [OPEN]
Common pre-geometric origin of interactions §Discussion
Hierarchical boson spectrum (4 levels) §Discussion
Discrete-symmetry · Anomaly · Flavour opens
OP-CPT1 · full nonlinear CPT
OP-P1 · exact max parity
OP-BRANCH1 · branch-pair cosmology
OP-GUT6c · mixed U(1)-grav (emergent)
OP-Yukawa · CKM/PMNS/CP phases/v spectrum
Planck-scale LIV
|δc/c| < 10^−15
§10
Topological anti-predictions
π_0 = π_1 = π_2 = 0
No walls / strings / monopoles
§8
Skyrmion / texture sectors
π_3(S³) = ℤ
m_n ~ n × 1.6 GeV
(legacy; secondary-sector route open)
§8
