

Illustrative comparative timeline under baseline- H_0 mapping compatible with the retained five-probe band
NOW anchored at same point • ECT younger by $\Delta t \approx 340$ Myr • Scen.~B: Big Crunch at $\sim 10^{100}$ yr

Note: schematic; epoch widths non-proportional. ECT resolves horizon, flatness, monopole problems without inflation (Level~A/B). Condensate curves schematic; only ϕ -sector resolved quantitatively.
