

**Euclidean
coherent regime**

$$\Gamma_{\text{loop}} \ll 1$$

Multiple winding
sectors coexist

No definite outcome

*detector
enters BVP*

**Environmental
coupling**

$$N_{\text{eff}} \gg 1 \text{ modes}$$

Decoherence
functional
 $\Gamma[q]$ grows

$$N_{\text{eff}} \rightarrow 1$$

**$E \rightarrow L$
transition**

$$\Gamma_{\text{loop}} \gtrsim 1$$

Off-diagonal
phases suppressed

Effective classicality

*classical
limit*

**Effective
Lorentzian
outcome**

Single branch
